FUEL FOR PROFESSIONALS

# ASPEN CLASSIC VEHICLE FUEL

## Petrol for vintage vehicles

Aspen Classic Vehicle Fuel is a petrol developed for older engines and the product is for those who want to take care of their vintage vehicle. It is ethanol-free, which means that it has a significantly longer shelf life than regular petrol and is ideal for long storage periods.

Aspen Classic Vehicle Fuel is 98-octane and meets the technical standard EN 228, which most car manufacturers recommend.

The product is of course also suitable for motorcycles, mopeds, petrol-powered vintage tractors and other enthusiast vehicles.

### Uses

### Units

Available in 25 litre containers.

### Product information

Aspen Classic Vehicle Fuel*		EN228**	Comments
RON	98	95	Knock resistance at low engine speeds.
MON	91	85	Knock resistance at high engine speeds.
Vapour pressure (kPa)	<60	Summer 45-70 Winter 70-100	High vapour pressure leads to more petrol fumes and operating problems in hot conditions.
Density (kg/m <sup>3</sup> )	725	720-775	Varying density affects carburettor settings.
Oxygen content (% weight)	1,3	<3,7	Harmful to health and the environment. Contributes to the acidification of lakes, for example.
Ethanol content (% volume)	<0,2	<10	Ethanol attracts water and can phase separate in the petrol. It can be more aggressive towards metals and rubber parts and increase the risk of corrosion.
Olefin content (% volume)	<0,5	<18	Unstable hydrocarbons can cause operating problems and reduce storage life.
Oxidation stability (minutes)	>1800	>360	A measure of the way petrol tends to react with oxygen. A low value means that the petrol will age faster.
